About Me

I am an experienced Technical Author with a keen eye for detail and excellent research and communication skills. I am passionate about crafting concise and user-friendly content from complex information. I thrive on the challenge of distilling technical concepts into easily understandable documentation.

With a background in Technical Authoring and recent graduation from Andrei Neagoie's 'The Complete Web Developer' course, I have acquired proficiency in JavaScript and React. This technical expertise enables me to bridge the gap between software development and technical writing, creating comprehensive documentation that meets both technical and user requirements.

Personal Development

Projects | Web Developer 2023

- **Web3 Geography** - Collaborated on a dynamic website to monitor and analyse vacancy data within the cryptocurrency industry, providing valuable insights into job opportunities and trends.
- **Move It! Sports Coaching** - Created and designed the company website for a sports coaching business, showcasing services, testimonials, and a seamless booking system to attract and engage clients.
- **Smart Brain AI** - Implemented an advanced image recognition system utilizing AI technology to accurately detect and identify faces in uploaded pictures

Professional Experience

dnata UK Ltd. | Technical Author 2017 – 2022

Key responsibilities:

- Create and maintain corporate documentation, libraries and control procedures.
- Communicate with the global business and dnata HQ to ensure standardisation of procedures.
- Conduct safety, quality and compliance audits based on the above procedures.
- Prepare audit reports and communicate the insights of these reports to the broader business.
- Consult with the management team to develop long-term corrective action plans.
